How to

Ensure secure usage of remote assistance tools?

The background features a light blue gradient with a network of white lines connecting circular nodes. Some nodes are white, while others are light blue. Faint binary code (0s and 1s) is scattered across the background.

1

Conduct security assessments

Conduct thorough security assessments during the selection process to ensure compliance with organizational policies and identify potential vulnerabilities.

The background features a light blue gradient with a network of white lines connecting circular nodes. Some nodes are white, while others are light blue. Faint binary code (0s and 1s) is scattered across the background.

2

Implement conditional access

Implement multi-factor authentication using hardware tokens for critical applications to prevent unauthorized access.

3

Turn on tamper protection

Enable tamper protection to prevent unauthorized changes to security settings, ensuring that your configurations remain secure.
